INSTALLATION INSTRUCTIONS

for the GENERA Shower Toilet

Installation should be carried out by a qualified person.

Read the installation instructions and safety instructions carefully before installing the shower toilet.

Symbols and their meaning

Danger

This symbol indicates hazards that may lead to death or injury if ignored.

Caution

This symbol indicates hazards that may lead to injury and/or damage to the shower toilet or other property if ignored.

Requirements for the person installing the device

The water supply line to the toilet should only be installed by qualified plumbers. The electrical installation must only be carried out by qualified electricians with the appropriate licenses.

Safety instructions

Follow national/regional standards and local installation regulations.

Do not install the device in a room where the temperature is below 4°C. This may result in damage to the device.

When moving the device from a cool to a warm room, condensation may occur on the surface of some system components. In such a situation, wait at least 12 hours before turning the device on, which will allow the condensed water vapor to evaporate.

Danger

Deadly risk of electrocution

- Make sure that the electrical system and bowl are earthed.
- The electrical system should be equipped with a residual current fuse and a separate overcurrent fuse.

Danger

It is forbidden for unqualified and unauthorized persons to disassemble the whole device or its individual components.

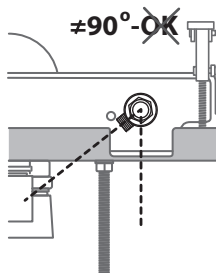

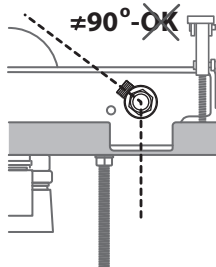

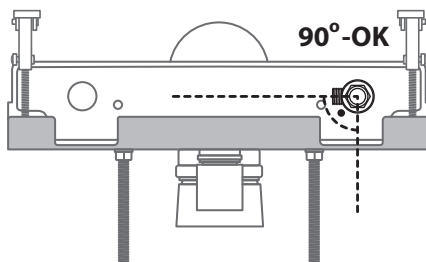

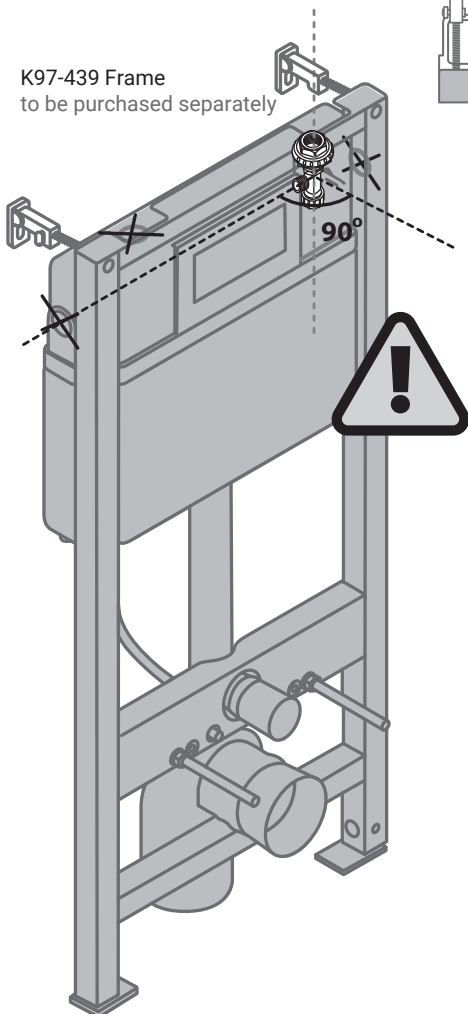

Caution

The instructions refer to the installation of a shower toilet with the dedicated Eterna concealed installation kit (K97-439) – to be purchased separately

Shower toilet bowl installation only possible with the water supply located at the top of the tank from the right side.
